Perhaps you've read science-fiction or seen movies such as The Terminator featuring human-like robots. Is the creation of such a creature possible with today's technology? What if a high tech corporation decided to build one? Could it? What would the impact be on our society? What would be the philosophical and political issues associated with the creation of a mechanical intelligence in the form of a human being? The Isaac Project tries to answer these questions.

It is the story of the creation of a humanoid robot using artificial intelligence technology available today. It handles the research and development aspect of such a project in a realistic manner with believable characters. The major characters are: GERI CHRANOWSKI, a strong-willed robotics expert and ambitious woman whose drive to climb the corporate ladder makes enemies of her underlings and ruins her love life.

JACK WESTCOTT, a scientist, whose passionate pacifism and his fight to keep his young mistress endanger the project. FREDERICK WOLFGANG, a petty tyrant and bigot whose software expertise is essential to the project completion, causes a major disaster because of his egoism and prejudices.
